EHR 2.0 will underpin a new patient-centric model of care delivery:

**New models of care need new models of IT**

Increasing investments in innovative technologies are accelerating the pathway to DX

**Patient experience and engagement**

By the end of 2020, 25% of data used in medical care will be collected and shared with healthcare systems by the patients themselves.

**Security, Privacy and Trust**

Security is the top business priority for the next 12 months but 1 out of 5 healthcare organizations have a solid plan to meet the May 2018 GDPR deadline.

**Advanced Analytics**

The pursuit of a value-based healthcare model is spurring healthcare providers to use analytics:

- To support clinical decision based on quality of care and other KPIs 23%
- To improve care integration 21%

IDC Health Insights’ European Healthcare Digital Transformation Strategies service provides detailed information about the evolution of healthcare IT in Europe. It offers valuable insights into IT solution trends in healthcare, including healthcare-specific technology such as electronic health records; admission, discharge, and transfer; digital medical imaging systems; VNA and archiving; telemedicine; and patient management systems.
